PT PROGRAMMES AND EQA SCHEMES FOR 2016

This document provides information on proficiency testing (PT) programmes for testing and calibration laboratories and external quality assessment (EQA) schemes for medical laboratories available in the Czech Republic in 2016.

CAI does not prescribe in which PT programmes /EQA schemes laboratories should take part in, and accepts laboratory participation in both national and international PT programmes /EQA schemes which are open and transparent (i.e. they provide necessary information about the organisation, implementation and evaluation of PT/EQA, including reporting of results). The laboratory should review in advance the possibilities of participation at PT/EQA and perform the analysis for selection of a suitable PT/EQA programme in accordance with the policy and procedures determined in MPA 30-03-...

CAI recommends participation preferably in PT programmes /EQA schemes which PT providers are accredited for this activity according to the international standard EN ISO/IEC 17043 “Conformity assessment – General requirements for proficiency testing”. The laboratory should in advance - comply with the policy and procedures set out in a document MPA 30-03-.. - to explore the possibility of participation in PT / EHK and perform analysis to select the appropriate program.
